Annex IV

Use of scheduled substances in the illicit manufacture of narcotic drugs and psychotropic substances

The use of scheduled substances in the illicit manufacture of narcotic drugs and psychotropic substances, depicted in figures A.I-A.IV below, represents classic production and manufacturing methods. The extraction of cocaine from coca leaf and the purification of coca paste and the crude base products of cocaine and heroin require solvents, acids and bases. A wide range of such chemicals has been used at all stages of drug production.

Figure A.I. Illicit manufacture of cocaine and heroin: scheduled substances and the approximate quantities thereof required for the illicit manufacture of 100 kilograms of cocaine or heroin hydrochloride.
Figure A.II.  Illicit manufacture of amphetamine and methamphetamine: scheduled substances and the approximate quantities thereof required for the illicit manufacture of 100 kilograms of amphetamine sulphate and methamphetamine hydrochloride.
Figure A.III. Illicit manufacture of methylenedioxymethamphetamine and related drugs: scheduled substances and the approximate quantities thereof required for the manufacture of 100 litres of 3,4-MDP-2-P

Note: Approximately 250 litres of 3,4-methylenedioxyphenyl-2-propanone (3,4-MDP-2-P) are required to manufacture 100 kg of 3,4-methylenedioxyamphetamine (MDA) hydrochloride; 125 litres of 3,4-MDP-2-P are required to manufacture 100 kg of methylenedioxymethamphetamine (MDMA) or 3,4-methylenedioxyethylamphetamine (MDEA).

a Including safrole in the form of safrole-rich oils.
Figure A.IV. Illicit manufacture of lysergic acid diethylamide (LSD), methaqualone and phencyclidine: scheduled substances and the approximate quantities thereof required for the illicit manufacture of 1 kilogram of LSD and 100 kilograms of methaqualone and phencyclidine.
