**Form B/P  
or  
Modification**

**Total quantities required annually for medical and scientific purposes**

Form B/P may be used to submit assessments for psychotropic substances to be used in the country by marking the box next to the phrase “Form B/P” above. Assessments should reflect the total medical and scientific requirements for one year. They should therefore include quantities to be manufactured domestically and not be restricted to imports. It should be indicated on the form if quantities for export or re-export are included in the total. Quantities needed for industrial purposes (i.e. to manufacture other substances) should also be reported and the purposes should be indicated.

This form may also be used to submit modifications to the current assessments by marking the box next to the word “Modification” above. Not only the additional quantities but also the revised total assessments should be indicated. The new total assessments will be substituted for the quantities indicated in previous submissions of form B/P and any subsequent modifications to those submissions. Unlike estimates for narcotic drugs, the assessments for psychotropic substances are not required to be confirmed by the International Narcotics Control Board (INCB).

INCB recommends that a revised form B/P be submitted at least once every three years. INCB will use reported assessments for reference during a three-year period unless a modification to previously submitted assessments is received. The quantities indicated on form B/P will be used as a guide by the authorities responsible for authorizing exports in exporting countries.

Assessments are updated every month and placed on the INCB Home page: [www.incb.org](http://www.incb.org) under: Psychotropic Substances – Status of Assessments. They are also published on a quarterly basis for distribution to all Governments.
